

## **Operator MTS announced the completion of the extension of the external Internet gateway of Belarus to 57 Gbit/s**

Operator MTS announced the completion of the extension of the external Internet gateway of Belarus to 57 Gbits with 47 Gbits in the Russian direction. Services Internet access to the Russian segment of the network are provided on the basis of the agreement between the national telecommunications operator of the Republic of Belarus Beltelecom and OAO Evrotel a 100% subsidiary of MTS. Evrotel OJSC won the tender for the supply of services of Internet access which Beltelecom conducted among the largest operators of the Russian Federation. Extension Internet gateway was organized with the help of Huawei equipment. According to General Director of OAO Evrotel Mikhail Stolyarov increase the capacity of the channel will allow customers Beltelecom to expand access to the Russian segment of the global Internet. The demand for services of transmission of the Internet traffic in this area is constantly growing and in the future, the operator hopes to further expand the Internet gateway. Currently, MTS has one of the largest backbone networks in the CIS. The company is actively working on the similar joints with the neighboring countries. The main efforts concentrated on the construction of border crossings with the networks of operators of fixed communication in Azerbaijan and Armenia
